

SYSTEM FOR PROVIDING LYRICS FOR DIGITAL AUDIO FILES**ABSTRACT**

Disclosed herein is a system for providing lyrics for a plurality of digital audio files. The system includes at least one terminal, a server, and a database server. The terminal selects a digital audio file among the digital audio files, and transmits tag information to receive lyrical data assigned to the selected digital audio file. The server retrieves the lyrical data, which is assigned to the selected digital audio file, using the tag information on the digital audio file transmitted from the terminal, and transmits the lyrical data to the terminal. The database server transmits the lyrical data in response to a request from the server and previously stores lyrical data in which lyrics are synchronized with digital audio files.
